Steps to determine relationship between 2 individuals with a common ancestor.

- Find relationship of 1st individual to the common ancestor in the far right hand column above the

Common ancestor

 box.
- Find the relationship of the 2nd individual to the common ancestor in the far right hand column below the

Common ancestor

 box.
- Follow the path across and down to where the 1st relationship meets the second relationships row. That intersecting box is the relationship of the two individuals.
